

NAVIS ARCA

Maritime Cyber Security

About US

NAVIS ARCA is an all-in-one Software and Hardware based cyber security solution for ships across the world. It allows the cyber security experts to remotely connect to the vessel's network and perform vulnerability assessment and penetration testing without being physically present in the vessel.

Role of cyber security in Maritime

Cyber Security becomes an inevitable topic in both maritime & offshore industries. Maritime is mainly based on software & network based operations. Cyber attacks on maritime networks will result in high loss for shipping industries.

Why NAVIS ARCA ?

Cyber Security becomes an inevitable topic in both maritime & offshore industries. Maritime is mainly based on software & network based operations. Cyber attacks on maritime networks will result in high loss for shipping industries.

Our Mission

To help you avail the absolute advantage of information technology in business sustenance and expansion, without the anxiety about the safety of your digital assets, through our affordable and innovate security solutions.

Our Plan

Ensuring cyber security management in all shipping companies as per IMO resolution MSC.428(98).

Our Vision

To be the leading global cyber solutions to the maritime industry with precision of time, and accuracy of results.

Our Services

Maritime Cyber Audit

- ✓ Complete Cyber Audit report on the Network.
- ✓ Determining OS and network vulnerabilities and patching them.
- ✓ Complete report on the routers, switches, and ports that are used.
- ✓ Framing firewall rules if necessary.
- ✓ Upgrading to all latest versions and patching of the all the vulnerabilities.
- ✓ Cyber Security Recommendations.
- ✓ Complete pen testing after the vulnerabilities are patched.
- ✓ Checking each Routers, Firewalls, Switches for latest firmware updates.

Information Gathering

The Network Penetration Process begins with a comprehensive survey of your network including architecture mapping and a complete network scan

Scanning

The testing process continues with port scanning that includes scanning open ports, closed ports, and filtered ports.

Vulnerability Scanning

A vulnerability scan is completed using automated scanning with access to a vulnerability database, where any vulnerabilities and exploits are verified.

Exploit Verification

Using manual verification and password cracking, available exploits are checked and retested if necessary to validate results before reports are produced.

Reports

On conclusion of a network penetration test, comprehensive reports are created to provide findings, suggest solutions, and make recommendations.

Our Features

NAVIS ARCA ensures maritime cyber security through our pre-loaded customized vulnerability tools which helps to identify all types of existing vulnerabilities globally. NAVIS ARCA act as your maritime cyber security partner of your ship which handles all your cyber security issues by its unique features such as:

Remote

Works remotely, anywhere, anytime

Performance

Optimized for remote access to avoid delay in response

Portable

Compact form factor to make it portable to fit in small places

Backend

Runs a customized operating system to suit the needs of expert

Tools

Complete suite of tools required by the cyber experts

Simple Installation process

Navis Arca has only a two step installation process

- I. Plug-in to the power source.
- II. Connect the ethernet cable to the network.
